

# Hollow Rubber Spring

**Hollow Rubber Springs** are an ideal product to reduce the effects of shock & vibration. They give high levels of deflection allowing shock forces to be absorbed to a high degree, and have progressive stiffness characteristics, meaning they can accommodate high loads.

**Applications include:-** Vehicle suspension systems (both primary & secondary), trailers, construction equipment, agricultural equipment and shock / vibration mountings for military equipment.

DATA SHEET HRS 2011. Other sizes available on request.
