

Established in 1992 with over 25 years' experience, AV Industrial Products Ltd is a leading manufacturer of:

- Vibration Isolation Solutions
- Rubber Engineered Components
- Shock Isolation Products

AV Industrial Products Ltd has extensive knowledge and understanding of applications within the OEM Construction and Plant industry.

Engine Mounts

Inherent vibrations isolated whilst controlling the movement of the engine. Low frequency and high shock solutions available.

Cab Mounts

ROPS/FOPS solutions available, they allow driver comfort within the cabin whilst providing its predictable movement.

Radiator Mounts

Reduced vibrations and multi-axis compliance.

Flip Flow Mounts

Under harsh dynamic conditions they transmit the rotational movement of the main screen to a linear movement for the floating frame.

Hopper Shock Mounts

Absorption of the shock energy from falling material. Low to High energy absorption capacities available.

Cone and Jaw Crusher Mounts

Absorb energy from the crusher chamber increasing the life of the supporting chassis.

Drum Mounts

Transmit the energy from the hydraulic motors to the roller, enabling the vibratory compaction whilst supporting the weight of the machine.

Compactor Plate Mounts

Transmit the energy from the hydraulic motors to the plate, enabling the vibratory compaction whilst supporting the weight of the machine.

ADT Suspension Mounts

Designed to take high compression loads and provide compliance in all directions. Allow body movements relative to the axles, whilst remaining captive.

Axle Control Link Bushes

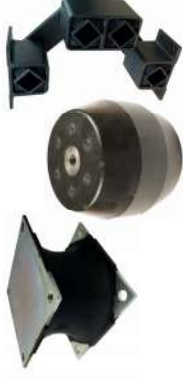

Necessary to transmit the driving/braking forces from axle to chassis, enabling the vehicle to move predictably.

Screen Box Snubbers

Providing lateral control of the screen box. Hard wearing, high tear resistance and excellent longevity.

Vibratory Screen Mounts

Allowing the screen box to move predictably and effectively. To absorb shock loadings and facilitate material separation.

Swinging Beam Bush

Allows rotational movement of the axle swinging beam whilst allowing conical compliance. Maintenance free.

Body Pads

Controlled support of the tipper body with high temperature solutions available. Anti-chucking and peeling with excellent resilience.

Belt Scraper/Torsion Springs

High belt speed and effective material removal solutions. Variety of tensioners and belt widths available.

Hydro Mountings

Provide optimum isolation at normal running speeds and control excessive movement and shake at low speeds

HAVS Isolation Mounts

ISO compliant solutions ensuring operator comfort for long durations.
